

I'm not robot!

**Junior Skill Builders** **ADDED VALUE** — Instant Access to Online Practice

# SPELLING

## In 15 Minutes a Day

- Quick and easy program for middle and high school students
- Tons of practice exercises
- Pinpoints your weak spots and tracks your progress
- Parents! Brush up on your own homework-helper skills!

**LEARNING EXPRESS**

| Question   | Answer   |
|--|--|
| 1. What is the primary function of the heart?                        | To pump blood throughout the body.   |
| 2. What are the four chambers of the heart?                          | Right Atrium, Right Ventricle, Left Atrium, Left Ventricle.                            |
| 3. What is the difference between oxygenated and deoxygenated blood? | Oxygenated blood carries oxygen to the body, while deoxygenated blood carries it away. |
| 4. What is the function of the pulmonary artery?                     | To carry deoxygenated blood from the heart to the lungs.                               |
| 5. What is the function of the pulmonary vein?                       | To carry oxygenated blood from the lungs to the heart.                                 |
| 6. What is the function of the superior vena cava?                   | To carry deoxygenated blood from the upper body to the right atrium.                   |
| 7. What is the function of the inferior vena cava?                   | To carry deoxygenated blood from the lower body to the right atrium.                   |
| 8. What is the function of the aorta?                                | To carry oxygenated blood from the left ventricle to the rest of the body.             |
| 9. What is the function of the coronary arteries?                    | To supply the heart muscle with oxygenated blood.                                      |
| 10. What is the function of the coronary veins?                      | To carry deoxygenated blood from the heart muscle back to the heart.                   |

FFOKTOROK FO SDNUOS EHT ERA TAHW44? Close and the intrathoracica presence increase52what might a abnormal in venou pressure indicated? (think!) these factors can increase central venous pressure: - decreased cardiac expression - increased blood volume - venereal constriction -change to be to the supine body posture - forced exaperation - muscle contraction53what effect do the following have on pressure blood? increna diameter of the arterioles54what effect do the continuation is on the blood presence? increna viscosita' blood 55what effect do the following have on blood presence? Increna heart output56what effect do the following safety statement? hemorrhage57what effect after the following on blood presence? arteriosclerosis58what effect the following has on blood presence? Increna pulse rate59in which (choose, recycle, or standing) is blood presence normally the highest? the lowest? superior - reclining disorder - standing60what imediate changes in blood pressure of observe when the subject stood upter always in tting or reclining position? blood pressure is higher when your heart is hard at work, pumping blood while your body moves, keeping balance, etc. (when you are awake and standing), and when you are reclining, your heart is resting and does not need to work hard to pump blood through the body y61what changes in vessels blood account for camping? blood vessels can feel the stress of cutting caused by blood flow. when cutting stress increases blood vessel responds and the diameter becomes larger. So in short, blood flow changes could cause blood vessels to change the 62after diameter the stood subject for 3 minutes, what to change in blood pressure are goals? How can you accept this change? blood pressure exhausted to normal, required 3 minutesblood to be distributed normally to and from the heart to the body. 63WHAT was the BLOOD BLOOD BLOOD EFFECT?exercise systolic blood pressure (high reading) usually increases gradually. However, regular exercise normally causes routine rest of systolic and diastolic blood pressure to decrease64what was the exercise effect on pulse rate? when you are working out, your body is oando a lot of energy, so your heart has to pump faster to keep up with the breathing rate, sometimes if enough oxygen is not administered to each cell, does lactic fermentation occur where lactic acid is produced65duced all this change effects reflected in the heart output or in peripheral resistency? 66why normally not increna signifier in diastolic pressing after exercise? diastolic pressure is pressure in the circulatory system between heartbeat. Is blood not at any pressure between your heartbeat, that you've just exercised or are sleeping 67what effects of if you've obsessed with blood pressure in the labs? TEMPERATURE:68WHAT do you think the character effect would be? Why? I was hoping he would describe a certain presumption, because for your bei vessels to dilate (open up)
